

newsMATHEMATICA
Nov. – Dec. (No. 532)

小平 邦彦:

Nevanlinna Theory

=Springer Briefs in Mathematics

86 pp.

9,990

12月出版予定

SPRINGER

詳細は本文 23 ページをご覧ください。

ご注文は是非小社にお願い申し上げます。

ご挨拶

本年中は格別のお引き立てを頂きありがとうございました。
明年も一層のご愛顧の程よろしくお願い申し上げます。
ここに“newsMATHEMATICA” No. 532 をお届けいたします。
尚、**12月29日(金)** から **1月4日(木)** まで休業させていただきます。
新年は **1月5日(金)** より平常通り営業致します。

(株)マテマティカ

Contents

General & Reference.....	1
Algebra.....	3
Geometry & Topology.....	12
Analysis.....	15
Logic, Foundations & Discrete Mathematics.....	27
Probability & Statistics.....	29
Applied Mathematics.....	33
Computer Science.....	38

136* **CRABB, M. & RANICKI, A.:**
**The Geometric Hopf Invariant
 and Surgery Theory**
 =Springer Monographs in Mathematics

407 pp. 21,990

Presenting classical ideas in a modern framework, the authors carefully highlight how their results relate to (and generalize) existing results in the literature. The central result of the book expresses algebraic surgery theory in terms of the geometric Hopf invariant, a construction in stable homotopy theory which captures the double points of immersions

Covariant Schrödinger Semigroups on Riemannian Manifolds

=Operator Theory, Vol. 264

220 pp.

18,990

This monograph discusses covariant Schrödinger operators and their heat semigroups on noncompact Riemannian manifolds and aims to fill a gap in the literature, given the fact that the existing literature on Schrödinger operators has mainly focused on scalar Schrödinger operators on Euclidean spaces so far. In particular, the book studies operators that act on sections of vector bundles. In addition, these operators are allowed to have unbounded potential terms, possibly with strong local singularities (ISBN 978-3-319-68902-9)

Nevanlinna Theory

=Springer Briefs in Mathematics

86 pp. 9,990

This book deals with the classical theory of Nevanlinna on the value distribution of meromorphic functions of one complex variable, based on minimum prerequisites for complex manifolds. The theory was extended to several variables by S. Kobayashi, T. Ochiai, J. Carleson, and P. Griffiths in the early 1970s. K. Kodaira took up this subject in his course at The University of Tokyo in 1973 and gave an introductory account of this development in the context of his final paper, contained in this book (ISBN 978-981-10-6786-0)

**Cauchy Problem for
Differential Operators with
Double Characteristics**

Non-Effectively Hyperbolic Characteristics
=Lecture Notes in Mathematics, Vol. 2202

213 pp. 6,990

Combining geometrical and microlocal tools, this monograph gives detailed proofs of many well/ill-posed results related to the Cauchy problem for differential operators with non-effectively hyperbolic double characteristics. Previously scattered over numerous different publications, the results are presented from the viewpoint that the Hamilton map and the geometry of bicharacteristics completely characterizes the well/ill-posedness of the Cauchy problem (ISBN 978-3-319-67611-1)

年末年始 休業のお知らせ

12月29日(金)から1月4日(木)まで
休業させていただきます。新年は1月5日(金)
より平常通り営業致します。

ZAKHAROV, V. K. & RODIONOV, T. V.:
Sets, Functions, Measures, Vol. 1

Fundamentals of Set and
Number Theory

=de Gruyter Studies in Mathematics, Vol. 68/1

400 pp.

23,990

This comprehensive two-volume work is devoted to the most general foundations of mathematics.

This first volume covers logic, set theory and number systems in detail

(ISBN 978-3-11-055008-5)

山田 澄生 (Eds.):

From Riemann to Differential Geometry and Relativity

2017 647 pp. 25,990

This book explores the work of Bernhard Riemann and its impact on mathematics, philosophy and physics. It features contributions from a range of fields, historical expositions, and selected research articles that were motivated by Riemann's ideas and demonstrate their timelessness. The editors are convinced of the tremendous value of going into Riemann's work in depth, investigating his original ideas, integrating them into a broader perspective, and establishing ties with modern science and philosophy. Accordingly, the contributors to this volume are mathematicians, physicists, philosophers and historians of science

CLAY, M. & MARGALIT, D. (Eds.):

Office Hours with a Geometric Group Theorist

2017 441 pp. 7,540

Geometric group theory is the study of the interplay between groups and the spaces they act on, and has its roots in the works of Henri Poincaré, Felix Klein, J.H.C. Whitehead, and Max Dehn. *Office Hours with a Geometric Group Theorist* brings together leading experts who provide one-on-one instruction on key topics in this exciting and relatively new field of mathematics. It's like having office hours with your most trusted math professors
