LEE, J.:

**Introduction to
Riemannian Manifolds**

2nd edition

=G.T.M. Vol. 176

436 pp.

12,930

7月出版予定

SPRINGER

詳細は本文 12 ページをご覧ください。
ご注文は是非小社にお願い申し上げます。

ご 挨拶

平素は格別のお引き立てに預かり厚く御礼申し上げます。
ここに“newsMATHEMATICA” No. 535 をお届け致します。
ホームページ上の“newsMATHEMATICA”は5月号、6月号
それぞれ更新致しております。是非ご覧くださいませ。

5月28日(月)は小社創立記念日の為、休業させていただきます。
また、**7月2日(月)**は決算棚卸しの為、休業とさせていただきます。
ご迷惑をおかけ致しますが何卒ご了承賜りますようお願い申し上げます。

25*	<p>ANDREWS, G. E. & BERNDT, B. C.: Ramanujan's Lost Notebook Part V</p> <p style="text-align: right;">425 pp. 18,900</p> <p>This fifth and final installment of the authors' examination of Ramanujan's lost notebook focuses on the mock theta functions first introduced in Ramanujan's famous Last Letter. This volume proves all of the assertions about mock theta functions in the lost notebook and in the Last Letter, particularly the celebrated mock theta conjectures. Other topics feature Ramanujan's many elegant Euler products and the remaining entries on continued fractions not discussed in the preceding volumes. (ISBN 978-3-319-77832-7)</p>

Motivic Integration
=Progress in Mathematics, Vol. 325
436 pp. 19,890

This monograph focuses on the geometric theory of motivic integration, which takes its values in the Grothendieck ring of varieties. This theory is rooted in a groundbreaking idea of Kontsevich and was further developed by Denef & Loeser and Sebag. It is presented in the context of formal schemes over a discrete valuation ring, without any restriction on the residue characteristic (ISBN 978-1-4939-7885-4)

 300 pp. 21,880

This book focuses on the vector Allen-Cahn equation, which models coexistence of three or more phases and is related to Plateau complexes – non-orientable objects with a stratified structure. The minimal solutions of the vector equation exhibit an analogous structure not present in the scalar Allen-Cahn equation, which models coexistence of two phases and is related to minimal surfaces

Dynamical Systems and Geometric Mechanics

An Introduction

=de Gruyter Studies in Mathematics

280 pp.

19,890

Introduction to Dynamical Systems and Geometric Mechanics provides a comprehensive tour of two fields that are intimately entwined: dynamical systems is the study of the behavior of physical systems that may be described by a set of nonlinear first-order ordinary differential equations in Euclidean space, whereas geometric mechanics explores similar systems that instead evolve on differentiable manifolds (ISBN 978-3-11-059729-5)

Fractional calculus is a rapidly growing field of research, at the interface between probability, differential equations, and mathematical physics. It is used to model anomalous diffusion, in which a cloud of particles spreads in a different manner than traditional diffusion (ISBN 978-3-11-055907-1)
